Hello co-authors,

After extensive review of the original manuscript, we have made some changes to the specific content. The dose-response postnatal data will be published in a subsequent manuscript as that study is on-going, and the present paper will report the entirety of the pilot postnatal data we have. The paper is largely unchanged and presents all of the lower-dose data we have, which is the most relevant to the risk assessment process for this chemical.

Attached are the revised manuscript (word doc), revised figures (as a pdf, figures are in order 1-6), and revised supplemental data (word doc).

For those authors outside of our immediate research group (Mark, James, Barry, Greg) – the Methods and data you contributed have not been changed from what you provided or reviewed in the last version of manuscript, we just wanted to keep you updated on the latest draft and provide you an opportunity to comment if you would like.

Please let me know if you have any comments/edits as soon as possible.

Cheers,

Justin Conley
